

Effectively Manage Your Single Largest Expense - Programming Costs

Nestor is the only software solution designed specifically to manage programming cost payments, accruals and retroactive adjustments.

Increase Productivity and Accuracy

Nestor automates many of the manual processes that consume staff time. As a result, error rates significantly decline, productivity increases, and valuable resources are freed up to focus their attention on more strategic activities such as optimizing program costs.

Manage All of Your Data From One Trusted Source

Enjoy comprehensive, real-time visibility into your program accounting data - on a current and historical basis from a single repository.

Confidently Calculate and Process Programmer Payments

Nestor's contract calculation engine was designed exclusively to address the complexities of cable programming contracts. Replace your manual process and spreadsheet calculations with this automated solution. The rate widgets you need are already pre-built into Nestor.

Effortless Retroactive Adjustments

Recalculating payments to programmers because of changes to contract terms, incorrect subscriber counts and channel lineup changes is a challenge that requires countless hours of manual rework to adjust. Nestor automates this process for you.

Robust Industry Specific Reporting

No need to worry about the expense of building and designing reporting software and functionality. Nestor provides robust and flexible analytical reporting and vendor report templates.

Simple Integration with Existing Infrastructure

Seamlessly interface with your subscriber management and channel lineup systems as well as A/P, G/L and data warehouses. Nestor proactively finds and corrects data issues before they cause problems.

Rigorous Security, Audit Functionality

Access to Nestor is limited to users with appropriate level(s) of credentials. Any and all application activity - including changes to the data itself - is logged for audit purposes.
